Department of Computer Science, Stanford University

1st Column

You can have as many columns as you want, and you can make them whatever widths you want. You can even have columns within columns, but I’m not showing it here because it would’ve looked weird. But if that makes sense for your purposes, you can do that.

You should take this document as a starting point, if you take it at all. It’s no good if everyone copies this layout, pastes in their text, and goes off to the printers. It’s totally worth thinking for a minute or two about if you want a 2/3-1/3 layout, or whatever

2nd Column

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Etiam lobortis facilisis sem. Nullam nec mi et neque pharetra sollicitudin. Praesent imperdiet mi nec ante. Donec ullamcorper, felis non sodales commodo, lectus velit ultrices augue, a dignissim nibh lectus placerat pede. Vivamus nunc nunc, molestie ut, ultricies vel, semper in, velit. Ut porttitor. Praesent in sapien. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Duis fringilla tristique neque. Sed interdum libero ut metus. Pellentesque placerat. Nam rutrum augue a leo. Morbi sed elit sit amet ante lobortis sollicitudin. Praesent blandit blandit mauris. Praesent lectus tellus, aliquet aliquam, luctus a, egestas a, turpis. Mauris lacinia lorem sit amet ipsum. Nunc quis urna dictum turpis accumsan semper.

DON’T GET TOO CLOSE TO MARGINS.
NO, SERIOUSLY. THERE’S NOTHING BUT TROUBLE HERE.

3rd Column

You can have some formulas I guess:

$$\begin{aligned} q^{-3} &\leq \frac{\sqrt{2} - \emptyset}{\tilde{\omega}\left(e, \dots, \frac{1}{P(A)}\right)} \wedge p\left(\bar{K}^{-5}, \tilde{m}\right) \\ &= \max_{B \rightarrow \emptyset} 1 \pm \dots \cup \pi\left(-q(d), \dots, \mathcal{C}''\right) \\ &\leq \left\{1^{-7}: \cosh^{-1}(-\kappa) \leq \max \int_{\hat{M}} \tanh\left(C^5\right) d\theta\right\} \\ &\leq \prod \cosh^{-1}\left(\pi^{-8}\right) + \dots \vee \omega\left(-\pi, \infty \sqrt{2}\right) \end{aligned}$$

You can also have a figure:

Fig. 1: Here’s where captions go. Captions are good.

4th Column

I think you’re getting the idea.

Acknowledgments

Be sure to thank people who made the work you did possible — specifically, funding sources, people and organizations who provided data, etc...

There’s no need to acknowledge your collaborators (the people you list at the top of the poster), because their contribution is being acknowledged in the form of co-authorship.

Fun fact: author order is “a whole thing”; you should check with your mentor about the norms in whatever field you’re publishing to.
